## TISSUE CUTTING CANNULA / CHAMFERED TUBES

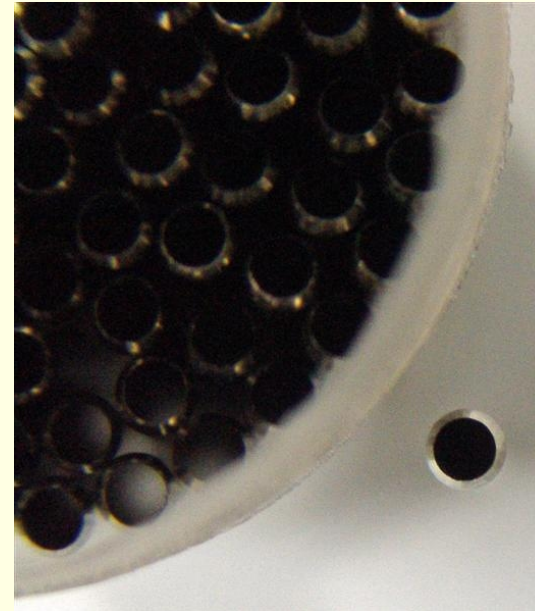

Tissue cutters are very critical components used in many medical devices for procedures, such as coronary by-pass

Sharpened tubes are also used in biopsy devices and other tissue sampling procedures, such as corneal and cartilage harvesting

Many hair transplant instruments also use these types of components

In addition to these types of devices and procedures, there are many new MIS techniques under development that require sharp edges, bevels, or other sharp features on the ends or sides of tubes.

Available in any desired / Custom O.D. ,  
W.T., I.D. And Length Combinations
